

# LaserViewer™ Advanced Analysis Package

*LaserViewer™ Advanced Analysis is an add-on software package that allows operators to conduct in-depth analysis and reporting complex laser profile data sets. This software module is intended for use on “off-site” computers, providing a variety of filters and processors that enable operators quantitatively assess the condition of a test article.*

## **Features**

- English or Metric display of measurements
- Multiple file comparison
- Reference subtraction
- Zoom, tilt, pan
- Local feature measurement
- Several mathematical filters
- Display in flat or cross-sectional perspective
- Data rotation about axis
- Multiple color palette display options
- Compatible with *LaserViewer 3D™* software package
- Ideal for analysis of complex 3D profilometry data
- Custom reporting modules are available depending on application
